chapter 1 the algebraic prerequisites for the book are covered here and in the appendix this chapter should be used as reference material and should be consulted as needed a systematic treatment of algebras coalgebras bialgebras hopf algebras and representations of these objects to the extent needed for the book is given the material here not specifically cited can be found for the most part in Sweedler 1969 in one form or another with a few exceptions a great deal of emphasis is placed on the coalgebra which is the dual of $n \times n$ matrices over a field this is the most basic example of a coalgebra for our purposes and is at the heart of most algebraic constructions described in this book we have found pointed bialgebras useful in connection with solving the quantum Yang-Baxter equation for this reason we develop their theory in some detail the class of examples described in chapter 6 in connection with the quantum double consists of pointed hopf algebras we note the quantized enveloping algebras described hopf algebras thus for many reasons pointed bialgebras are elsewhere are pointed of fundamental interest in the study of the quantum Yang-Baxter equation and objects quantum groups

this third volume of problems from the William Lowell Putnam Competition is unlike the previous two in that it places the problems in the context of important mathematical themes the authors highlight connections to other problems to the curriculum and to more advanced topics the best problems contain kernels of sophisticated ideas related to important current research and yet the problems are accessible to undergraduates the solutions have been compiled from the American Mathematical Monthly Mathematics Magazine and past competitors multiple solutions enhance the understanding of the audience explaining techniques that have relevance to more than the problem at hand in addition the book contains suggestions for further reading a hint to each problem separate from the full solution and background information about the competition the book will appeal to students teachers professors and indeed anyone interested in problem solving as a gateway to a deep understanding of mathematics

a critical volume for the homeschooling community that helps parents make informed choices regarding learning styles and curriculum
