the optimisation of economic systems over time and in an uncertain environment is central to the study of economic behaviour the behaviour of rational decision makers whether they are market agents firms or governments and their agencies is governed by decisions designed to secure the best outcomes subject to the perceived information and economic responses including those of other agents economic behaviour has therefore to be analysed in terms of the outcomes of a multiperiod stochastic optimisation process containing four main components the economic responses the dynamic constraints represented by an economic model the objective function the goals and their priorities the conditioning information expected exogenous events and the expected future state of the economy and risk management how uncertainties are

accommodated the papers presented in this book all analyse some aspect of economic behaviour related to the objectives information or risk components of the decision process while the construction of economic models obviously also has a vital role to play that component has received much greater or almost exclusive attention elsewhere these papers examine optimising behaviour in a wide range of economic problems both theoretical and applied they reflect a variety of concerns economic responses under rational expectations the lucas critique and optimal fiscal or monetary policies market management partly endogenous goals evaluating government reactions locational decisions uncertainty and information structures and forecasting with endogenous reactions

the books in this set originally published between 1927 and 1996 discuss the oil industry and its impact on the world economy in the twentieth century the issues of trade tax and energy policies as well as national security are all relevant to the economics politics of oil and the volumes analyse and discuss the extent to which american dominance in world affairs is based on the control of oil resources and the changes which will inevitably take place with the end of the oil era discernible trends in such crucial areas as global petroleum supply and pricing and the international economic and political implications of both the role of wealth maximisation and wealth satisficing the impact of north sea oil and gas on the british economy relations between oil exporters and importers and between the usa europe and the arab world the most important strategic issues facing both the producers and consumers of oil and gas

originally published in 1984 douglas a bohi and michael a toman have produced a convenient reference source about disparate elements in the theory of nonrenewable resource supply and about general issues that arise when applying dynamic economic analysis the authors emphasise the inherently dynamic nature of resource supply decisions the effects of resource depletion on costs and behaviour and the influence of uncertainty about costs prices and reserves this title will be useful to students interested in environmental studies and economics practitioners and others who need to know more about complex interactions of economic forces and the resource base

investment is characterized by costly reversibility when a firm can purchase capital at a given price and sell capital at a lower price we derive an explicit analytic solution for optimal investment by a firm facing costly reversibility in addition we derive a local approximation to the solution which highlights the effects of the parameters of the problem on the triggers for investment more generally we extend the jorgensonian concept of the user cost of capital to the case of uncertainty and define  $c_u$  and  $c_l$  as the user costs of capital associated with the purchase and sale of capital respectively optimality requires the firm to purchase and sell capital as needed to keep the marginal revenue product of capital in the closed interval  $c_u$   $c_l$  this prescription encompasses the case of irreversible investment as well as the standard neoclassical case of costlessly reversible investment finally quantitative analysis suggests that even when the difference between the purchase and sale prices of capital is small user costs associated with purchasing and selling capital are closer to those applicable under complete irreversibility than to those applicable under costless reversibility

as the difficulties increase for the production of energy by safe economic and environmental

means the necessity for systems to deal with these problems becomes essential the symposium presented and discussed the state of the art in the development of the required energy systems with special emphasis on their management and economic implications the papers taken from the meeting cover areas including power generation energy and environment renewable energy power system operation and electricity supply and demand

issues for feb 1965 aug 1967 include bulletin of the institute of management sciences

this book presents the calculus of variations and optimal control theory illustrating the analysis with examples from economics and management science topics are treated in the simplest possible way students are taken from scratch to a fairly good mastery of these dynamic optimisation tools for the purpose of reading the literature and doing research requiring these tools the most important features of the book are the simplicity and thoroughness of presentation students working at the book systematically will acquire a fairly good knowledge of the field and knowing how results have been derived they would be in a position to apply modify and even extend these standard results to the problems under investigation the new edition has two new chapters chapter 11 on differential games which would be useful for students working in industrial organisation and chapter 12 on stability of optimal control which contains new results
